

myhosting.com® provides Microsoft® Windows® Server 2003 hosting platform to customers

Toronto, Ontario --- April 24, 2003

myhosting.com, a leading global provider of affordable and superior web and application hosting services and a brand of SoftCom Technology Consulting Inc., announces the availability of web and applications hosting services on the Microsoft Windows Server 2003 platform. Starting today, myhosting.com will be one of the first web and application hosting providers worldwide that will offer services hosted on the Microsoft Windows Server 2003 platform. myhosting.com is the world's largest Microsoft exclusive web and application hosting provider – NetCraft 2002 (www.netcraft.net).

“Our customers expect the latest technology without jeopardizing service quality,” says Tony Yustein, CEO of SoftCom Technology Consulting Inc. “All of this is possible with Windows Server 2003. Windows Server 2003 is a highly functional, reliable and scalable operating platform that enables us to better service our current customer base with improved performance, features and compatibility with the latest applications our customers demand.”

“myhosting.com is an important member of our partner ecosystem, helping deliver a new generation of IT solutions to customers,” said Frank Clegg, President, Microsoft Canada Co. “Their decision to choose the Windows Server 2003 platform shows that this is a true enterprise-class solution that can help Canadian companies reduce costs and increase the efficiency and effectiveness of their IT operations.”

myhosting.com will provision all new hosting accounts after April 24 exclusively on the Microsoft Windows 2003 platform. Customers will be able to take advantage of new features that include; IIS v6.0, ASP.NET, and the Microsoft .NET framework. The Microsoft Windows Server 2003 platform offered by myhosting.com provides customers with a comprehensive, reliable and highly configurable hosting environment that will enhance their hosting experience.

myhosting.com recently launched competitive Email and File Hosting service plans to address the consumer and SOHO market segments. The Email Hosting plan allows customers to establish unique email addresses on the Internet, thereby associating their name to a specific domain (e.g. myname@mydomain.com). The File Hosting plan is suitable for customers who are seeking a remote file repository, interested in creating and hosting a virtual photo album or those seeking to build a less sophisticated, more economical business card-style web site. Email and File Hosting Plans are available from myhosting.com for US\$2.95/month and US\$4.95/month respectively.

Other recently launched features and enhancements include; a Web Album, web-based File Manager tool and functional changes to the Control Panel. All of these enhancements are included free as part of the services provided by myhosting.com.
