

## **myhosting.com Introduces Microsoft®Windows®Server 2008/IIS7 Web Hosting Plans**

**Toronto, Ontario --- --- March 3, 2008**

myhosting.com, a leading global provider of affordable web, email and application hosting services and a brand of SoftCom Technology Consulting Inc., announces the introduction of new Microsoft Windows Server 2008/IIS7 based Web Hosting Plans.

Microsoft Windows Server 2008 is the most advanced Windows Server operating system yet, designed to power the next-generation of networks, applications and Web services. Internet Information Server IIS 7 together with the .NET Framework 3.5 provides a comprehensive platform for building applications that connect users and data, enabling them to visualize, share, and act on information.

“In a shared hosted environment, the key to success is balancing the needs of the one with the needs of the many,” said Tony Yustein, CEO of SoftCom Technology Consulting Inc. “Providing reliable, secure and feature rich hosting plans is going to be even more important as the internet evolves”

In conjunction with the launch of Windows Server 2008/IIS7 Hosting plans, the website for myhosting.com was also updated to provide an improved online experience and signup process that is both exciting and user friendly.

“We are committed to supporting our customers by providing the tools they need to leverage new technologies on the internet,” said Tony Yustein, CEO of SoftCom Technology Consulting Inc. “Customers have told us that they want Easy-to-Use websites with built in functionality, and that’s what we provide.”

Windows Server 2008 is the most secure Windows Server yet. The operating system has been hardened to help protect against failure and several new technologies help prevent unauthorized connections to networks, servers, data, and user accounts.

“The key feature that we see as enabling myhosting.com to benefit from IIS7 is the isolation of web sites by application pools. In IIS7 we can set each website to use its own specified application pool, contrary to multiple websites running in the same shared application pool in IIS6.” said Tony Yustein, CEO of SoftCom Technology Consulting Inc.
