# myhosting.com Offers WebMatrix Enabled VPS Hosting Plan

myhosting.com, a leading provider of affordable VPS Hosting and Cloud Services, has announced a new WebMatrix VPS hosting plan supporting Microsoft's new WebMatrix development tool. The new virtual private server hosting service became available with the WebMatrix release on January 13, 2011.

**Toronto, ON – January 20, 2010:** Microsoft WebMatrix is a free development tool that integrates a number of development applications into a single solution. Through the development platform, users can write code, deploy open source applications or construct a site based on pre-loaded templates.

"WebMatrix is an ideal tool for developers or webmasters in search of a simple, streamlined program for easy web development," said Jeremy Adams, Product Manager for myhosting.com. "Microsoft's new development platform bundles the essential development tasks into a cohesive, intuitive program. As a result, beginners can use the templates and built-in applications to easily design their own site. Advanced users, on the other hand, can use the utility to deploy basic, foundational development applications while writing custom code to enhance the site."

WebMatrix is a free-to-use development tool that requires minimal time for download and installation. As a result, a hosting plan supporting WebMatrix allows users to start developing their site within minutes.

The development application is also a powerful tool, despite its easy-to-use nature. WebMatrix offers countless options for customization because all of its utilities, including those for writing code, adding applications, deploying content management systems and editing a template, are fit into a single unified interface. As a result, developers will no longer need to switch between multiple programs to perform simple tasks.

myhosting.com is offering WebMatrix support with a new VPS offering. The plan is built on a foundation of Microsoft virtualization and hosting applications, including Hyper-V, Windows Server 2008 R2 and Microsoft SQL Server 2008 R2.

"Adding a WebMatrix VPS to our stable of hosting plans provides our customers with a new technological offering that represents our overall goal," said Celal Ulgen, Chief Marketing Officer at myhosting.com. "At myhosting.com, we are dedicated to providing customers with the best service possible. With the addition of the WebMatrix VPS, webmasters with limited development experience can still enjoy the benefits of our virtual private server hosting plans. By combining WebMatrix's easy-to-use unified development platform with myhosting.com's focus on customer service, even novice developers can enjoy a powerful hosting service."

The new WebMatrix VPS service from myhosting.com is currently available for a promotional price of $29.95 per month for users making a single annual payment.
