myhosting.com unveils new Virtual Private Servers with Parallels Plesk Panel 10

myhosting.com, a leading global provider of affordable VPS hosting and Cloud services, including Virtuozzo VPS and Hyper-V VDS hosting solutions, has announced the launch of Parallels Plesk Panel 10.2 with their virtual server hosting offerings.

Toronto, ON – July 7, 2010: myhosting.com has updated its Plesk virtual private server hosting plans to support the new Parallels Plesk Panel 10 platform. With Plesk Panel 10, users have more options for establishing their VPS servers, as the control panel is even more compatible with both Windows and Linux-based VPS operating systems.

With Plesk Panel 10, Parallels has introduced a number of new features designed to make the control panel the most powerful on the market. Overall, Plesk Panel 10 is an integral part of a VPS hosting plan because it allows users to simplify server management tasks.

"With Plesk 10, users can simultaneously manage all of their hosting plans in a single interface. This alone makes it a powerful control panel, but the new version also features a simplified user interface that is capable of reducing maintenance tasks to such an extent that it saves users money in the long run," said Celal Ulgen, Chief Marketing Officer at myhosting.com.

The Plesk Panel 10 new user interface features a web-like design, making navigation an intuitive and familiar process. It also simplifies the overall learning curve associated with using a new control panel, helping users quickly learn how to perform new tasks and leverage the control panel's most powerful tools. The user interface is also designed with a completely separate administrator interface, making it easier for administrators to manage server and business-related tasks without having to sort through day-to-day maintenance and development issues.

Other upgrades in Plesk include general control panel enhancement, improved overall performance and page loading speed, and an optional integrated billing application to automate the hosting process throughout the customer's lifecycle. The control panel also includes an integrated site builder application, allowing less technical users and end users to build a website using powerful tools built into the control panel itself.

"At myhosting.com we are happy to offer our customers the opportunity to improve their virtual server hosting experience with Parallels Plesk Panel 10," said Jeremy Adams, Product Manager at myhosting.com. "Plesk 10 simultaneously makes our hosting platform more intuitive and powerful for users while allowing us to improve our VPS services."

myhosting.com has integrated Plesk Panel 10 within all of its VPS server hosting plans, making it available for Debian Linux, CentOS and Windows 2008 VPS Hosting plans.
